No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

cu nuclear signalling protein designated 1521, and a novel human mitogen-
cu coupled receptor (GPCR) kinase (MAPKP) phosphatease MAPKP designated 15418, and
cu citivated protein kinase (MAPKP) phosphatease MAPKP designated 15418, and
cu citivated protein kinase (MAPKP) phosphatease MAPKP designated 15418, and
cu citivated protein kinase (MAPKP) phosphatease MAPKP designated 15418, and
cu he polymucleotide sequences encoding them. The sequences such as
cu citivated protiferative and differentiative disorders (e.g. haematopoietic
cu cellular proliferative and differentiative disorders (e.g. haematopoietic
cu disorders). They are also useful in screening assays, detection assays
cu disorders). They are also useful in screening assays, detection assays
cu disorders). They are also useful in methods of treatment (e.g.
cu rials and pharmacogenomics), and in methods of treatment (e.g.
cu rials and pharmacogenomics), and in methods of treatment (e.g.
cu cities and pharmacogenomics), and in methods of treatment (e.g.
cu rials and pharmacogenomics), and in methods of treatment (e.g.
cu cities and pharmacogenomics). The sequences may also be used to screen
cu therapeutic and prophylactic). The sequences may also be used to screen
cu therapeutic and prophylactic). The sequences may also be used to screen
cu the polypeptide sequences are useful as immunogens to generate antibodies
cu mapping their respective genes on a chromosome, identifying gene regions
cu associated with cellular proliferative or differentiative disorders, and
cu associated with cellular proliferative or differentiative disorders, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-10-044-205A-2 (1-553) x ABS57375 (1-2198)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. The present cDNA sequence encodes a human G-protein coupled receptor kinase (GRK), also designated NHP (novel human protein) in the specification, which is claimed in the invention. The invention comprises protein coupled receptor kinases. Oligonucleotides derived from the screening libraries and assessing gene expression patterns. The nucleotides of the invention are useful as hybridisation probes for nucleotides of the invention are useful as hybridisation probes for nucleotides of the invention are also useful in drug screening and gene therapy for the modulation of GRK expression. The nucleotides of the products in vivo. The nucleotide sequences of the invention can be used to genetically engineer host cells to express GRK useful in addressable arrays for identifying and characterising the screen collections of genetic material from patients who have a particular medical condition. The proteins of the invention are useful for generating antibodies, as reagents in diagnostic assays, for	New polynucleotides encoding human proteins that share sequence similarity with animal kinases e.g. G-protein coupled receptor kinases, useful for drug screening, diagnosis and in gene therapy of biological disorders. ```

Secreted proteins and polymucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, parkinson's disease, Alzheimer's disease, infection, autoimmune disorder wounds, atheroscierosis, infection, autoimmune disorder.

Claim 2(a); Page 255-256; 335pp; English.

conditions, varietary, antications, controlled, controlled, controlled, antichtyroid, cerebroprotective, anotectic, condition and metabolic. Polypeptides and polynucleotides of the invention are conditioned in the treatment, or as a vaccine in the prevention of, cancer, conditioned in the treatment, or as a vaccine in the prevention of, cancer, conditioned in the treatment, or as a vaccine in the prevention of, cancer, conditioned in the treatment, or as a vaccine in the prevention of, cancer, conditioned in the prevention of, cancer, confirmantion, neoplastic diseases, nervous system related disorders and confidence in the systemic autoimmune disease, hyper-immunity, conditioned in the prevention, thyroid conditioned in the system dysfunction, thyroid conditions, pastrolic diseases, sperm dysfunction, thyroid conditions, neurological diseases, stroke, angiogenesis, controlled in the spinal cord, thyroid gland, heart, convilation disorders, diseases in the spinal cord, thyroid gland, heart, convilation diseases, and alleviation of precocious puberty. The growth abnormalities, and alleviation of precocious puberty. The sequences given in records ABQ86130-ABQ86184 represent novel human cDNA's form the convilation in records ABQ86130-ABQ86184 represent novel human cDNA's convilation in records ABQ86130-ABQ86184 represent novel human cDNA's The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The activity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, invention

PT signaling, comprises mixing a compound with a cone opsin kinase and with XX XX Example 4; Page 45-46; 61pp; English.
```

CC The present invention relates to novel human cone opsin kinase (G-protein CC coupled receptor kinase 7; GRK7) and their corresponding polynucleotides. CC The invention further relates to a method of identifying compounds that CC alter the inhibition of GRK7 polypeptide activity which involves mixing a CC determining if the test compound alters the inhibition of GRK7 protein and an inhibition of GRK7 protein activity by the inhibitory polypeptide. GRK7 sequences are useful for CC treating conditions related to come visual signalling (e.g., night CC blindness, colour blindness, difficulty with colour vision, visual contensity, Oguchi disease or dominant congenital stationary night CC intensity, Oguchi disease or dominant congenital stationary night CC depression, anxiety, mental fogginess, memory loss, headaches, fatigue, CC or jet lagi, Agonists of GRK7 polypeptide activity may be used to treat CC probes to screen for inherited disease for which increased GRK7 polypeptide CC proteceptor-mediated diseases. The GRK7 proteins are also useful in the CC come photoreceptor visual signalling or circadian rhythm, as molecular cCC and vision resolution. They are also used as gene therapy tools for individuals with such disorders. The present sequence is human GRK7 cDNA

```
The invention relates to new isolated NOVX polypeptides, the genes of encoding them or sequences having at least 5% identity to the amino acid cor nucleotide sequences. The NOVX polypeptide is useful as a therapeutic, or nucleotide sequences. The NOVX polypeptide is useful as a therapeutic, or associated with a human disease, which includes a pathology associated with NOVX polypeptide. The NOVX polypeptide is particularly useful for cwith NOVX polypeptide. The NOVX polypeptide is particularly useful for conjupeptide in a mammal, e.g. a human. The NOVX nucleic acid and polypeptide in a mammal, e.g. a human. The NOVX nucleic acid and complypeptide in a respecially useful for treating or preventing e.g. polypeptide are especially useful for treating or preventing e.g. conjupention, disorder, and the nove and the nucleic acid and conjupential are especially useful for treating cancer or prostate conjupential and the protein is useful in general disorders, Alzheimer's disease, conjupential assay system for conditions. The protein is useful in gene therapy for treating the above conditions. These are also useful in developing powerful assay system for functional analysis of various human disorders, as well as in diagnostic functional analysis of various human disorders, as well as in diagnostic infunctions. This sequence represents one of the NOVX genes of the
                                                                                                                                     Percent Similarity:

> CC The present CDNA sequence encodes a human G-protein coupled receptor CC kinase (GRX), also designated MHP (novel human protein) in the specification, which is shown in the sequence listing. The invention CC similarity to G-protein coupled receptor kinases. Oligonucleotides CC derived from the nucleotide and protein sequences which have CC grobes for screening libraries and assessing gene expression patterns. CC probes for screening libraries and assessing gene expression patterns. CC gene therapy for the modulation of GRX expression. The nucleotides of the invention are also useful in drug screening and CC invention can be used to genetically engineer host cells to express GRX CC useful in addressable arrays for identifying and characterising the CC temporal and tissue specific expression of a gene and in microarrays to CC screen collections of genetic material from patients who have a local condition. The proteins of the invention are also cc in assays for screening for compounds that are useful in the treatment of comental, biological or medical disorders/diseases

New G-protein coupled receptor kinase polypeptides and polynucleotides, useful in identifying modulators of the enzyme for treating cancer, diabetes, a central nervous system disorder, a cardiovascular disorder or

Claim 1; Fig 11; 129pp; English.

The present sequence encodes a human G protein-coupled receptor kinase CC (GRK) protein (I). (I) has cytostatic, antidiabetic, neuroprotective, CC (GRK) protein (I). (I) has cytostatic, antidiabetic, neuroprotective, CC (GRK) protein (I). (I) has cytostatic, antidiabetic, neuroprotective, candiovascular, anti-Parkinsonia, cardiant, vasotropic and CC antiasthmatic activities, and can be used in gene therapy. (I) can be CC regulated to treat cancer, diabetes, a central nervous system (CNS) CC regulated (e.g. anxiety or mood disorders, Albheimer's disease and CC Parkinson's disease), cardiovascular disorders (e.g. congestive heart or CC failure, myocardial infarction, ischaemic diseases of the heart or hypertensive vascular disease), asthma and chronic obstructive pulmonary CC disorder (COpD). GRK molecules are useful in screening for agents that CC regulate or decease the activity of a GRK. GRK sequences may also be used CC and abnormalities or susceptibility to diseases CC and abnormalities or susceptibility to diseases CC and abnormalities related to the presence of mutations in the nucleic CC and sequences that encode the GRK enzyme
